                                                3257.00 30111218.00
```

Observando o percentil 99 tem-se que 99% dos valores são menores ou iguais a 3257 kcal. Tomarei como limite das observações de caloria, pois é improvável/inviável que receitas ultrapassem de maneira tão acentuada esse valor; receitas com milhões de kcal são claramente erros nessa base de dados.

```
dsel <- subset(dsel, dsel$calorias <= quantile(dsel$calorias, .99)[[1]])
ggplot(dsel, aes(x=calorias)) + geom_histogram(binwidth = 200)</pre>
```

## Evolução da Resposta em Relação a Var1

```
#g1 + scale_color_manual(breaks=c(0:1), palette = "YlGn")#values=c("red", "green"))
#g1 + scale_fill_brewer(palette = "YlGn")
```

```
glm(sobremesa~calorias+proteina+gordura+sodio, family = binomial())
```

```
## Warning: glm.fit: probabilidades ajustadas numericamente 0 ou 1 ocorreu
